Code:

```
foods = []
prices = []

while True:
    food = input("Enter food q to quit: ")

    if food.lower() == "q":
        break
    else:
        price = float(input("Enter Price: "))
        foods.append(food)
        prices.append(price)

    #Display the items in the cart
print("Here are your orders...")

for food in foods:
    print(food, end=' ')

for price in prices:
    print(price, end=' ')

total = 0
for price in prices:
    total += price

print()
print(f"Total: {total}")
```

Output:

```
C:\Users\COMLAB\PycharmProjects\pytho
Enter food q to quit: Apple
Enter Price: 100
Enter food q to quit: guava
Enter Price: 200
Enter food q to quit: peach
Enter Price: 99
Enter food q to quit: q
Here are your orders...
Apple guava peach 100.0 200.0 99.0
Total: 399.0
```
